ROUTE 1 – BOX 487

South Linn Avenue, Off Powell Valley Road

PHONE SUNSET 2477

Oregon Gardens are located about nine miles east of Portland, Oregon, on South Linn Avenue, one-fourth mile south of Powell Valley Road.

Soil is gravelly loam perfectly drained and ideally constituted for growing alpine and rock plants. Visitors welcome at any time.

————

WHAT WE GROW

We are growers on a large scale of hardy perennial, alpine and rock plants, especially those native to the Pacific Northwest. Many of the world's most beautiful rock plants are found in the mountains and deserts of Oregon. We have been collecting and growing native plants for several years and at present have some 800 species growing on our grounds. Some of these natives are now being offered for sale for the first time. Some are robust, strong growers. Others, of most dainty, slow growth, require time to reach their true beauty. Many are worth any effort required to get them established.

HARDINESS

Plants are field grown from seedling stage and practically all should be hardy in any part of the United States. Nearly all the Oregon plants offered for sale are from high altitudes and desert areas where they are exposed to as great extremes of weather and temperature as will be experienced anywhere in eastern United States. Any plant of doubtful hardiness will be so marked.

SHIPPING

Shipments will be made to all points west of the Rockies post paid. Customers wishing delivery east of the Rocky Mountains will please add 10 per cent of the order to help defray the extra cost of packing and postage. Plants that require to be mudded or balled will be sent express collect, unless otherwise requested.

SHIPPING SEASON

Many alpine plants that are regarded as fussy have secured their reputation because of being moved at the wrong time. Most of our native plants have definite dormant seasons during which they may be moved with little trouble, while movement at another season often proves fatal. Therefore, we will take the liberty of withholding shipment of such plants until the proper time unless the purchaser specifically requests otherwise. Notice will be sent advising of approximate shipping date of such back order. As our stock of many of these plants is limited we suggest that orders be placed early.

GUARANTEE

We will guarantee plants grown from cuttings and divisions to be true to name and color. Our seed is purchased from the most reliable sources but we can not guarantee seedlings. Our responsibility ceases when plants are delivered in good condition to the transportation companies and receipt is obtained for same.

PRICES

A dozen plants of the same kind will be sold at ten times the single plant price, three plants at the dozen rate, and 100 plants at seven times the dozen price. For example, plants priced at 25c each will be \$2.50 per dozen or \$17.50 per hundred. Speial prices on larger lots. Order by number if you wish.

CONSTRUCTION AND PLANTING

We do construction of rock gardens and plant them from our choice assortment offered in this catalogue. If you live at a distance we will furnish planting instructions along with plant orders where requested. We will gladly submit estimates on construction and planting work within a reasonable distance of Portland.

Rock Gardening

HE newest and, in many ways, the most delightful form of gardening is in building and maintaining rock gardens. Our business is the propagation of perennial plants and bulbs suitable for such gardens. We hope this little catalogue will fall into the hands of many persons who are just becoming interested, and we are, therefore, giving a few pointers on the proper building of rock gardens.

Contrary to the belief of many, building a rock garden is neither mysterious nor difficult. A rock garden is primarily a place in which to grow and display the dazzling color and compact habits of the alpine and rock plants. If a stone mason be employed for the work a display of masonry

or rock with a few poor places for plants usually results.

It is possible to spend endless amounts of money on rockeries and many people in this country feel it to be a rich man's game. As a matter of fact, because of their dwarf growth, a surprisingly large number of rock plants can be grown in a small space. This makes it possible to work

out color combinations and seasonal displays in a small space.

No matter if your rock garden be small or large, build it right. Do not put up a pile of rock and throw dirt over it. First be sure of drainage. Dig down, put in a layer of small rock and gravel, and with this as a foundation begin to build the rockery. If possible, choose rough irregular stones well weathered so that no newly broken surfaces will show. Place the rock so that it will be in a natural position, always with the largest surface down and sloped so the water will reach the roots of the plants to be planted later about them. Build from the bottom, packing the earth, which can be ordinary garden soil mixed with one-fourth sand and an equal amount of leaf mould, firmly about the rocks and in the crevices to accommodate the different types of plants. If possible, allow it to settle some time before planting. Some rocks should be completely buried as many alpines delight in wrapping their roots about them to secure coolness and moisture.

Therefore, keep these points in mind when building a rock garden: Rock should be half to two-thirds buried in the ground, always with the

largest surface down.

Place the rock tilted back so water will penetrate to the roots of the plants.

A bank or natural slope is an advantage as it saves labor.

Provide a place for shade plants and a boggy place if bog plants are desired.

Most alpines delight in full sun if rocks and some moisture are present to provide coolness for the roots.

Porous and absorbent rock is best and it should all be of the same kind.

Alpines need a good depth of soil.

If the soil is heavy provide drainage by using gravel or broken rock under the soil and mix some sand and gravel with the soil. Leaf mould will also be an advantage.

Earth should be packed firmly in crevices and about the rocks.

Don'ts to Be Observed in Building a Rock Garden

Don't place rocks so upper overhang the lower ones.

Don't build a garden of rocks, but a garden for alpine flowers.

Don't use more than one kind of rock in construction. Don't build under the drip of trees or close to a building.

Don't make the soil rich with manure; it makes the plants straggly.

Don't use smooth hard surface rocks. Don't use too many or too small rocks.

Don't display, but conceal any mason work if possible.

Planting Suggestions

Young thrifty plants quickly shape themselves to the contour of the rocks and look as if they belong there.

The best effects can be secured by keeping a balance between the various types of ground covers, dwarf shrubs, evergreen and deciduous

perennials and dainty bulb flowers. Some of each will distribute the

blooming period through the season.

For ground covers and carpeters the creeping Thymes take first rank, with Sagina a close second. In our opinion, many of the Sedums are valuable for ground covers. Such dainty flowering bulbs as Scillas, Galanthus, Grape hyacinths, small species of Tulips and Narcissus and our own native Calochorti and Erythoniums planted beneath carpeting plants will increase in beauty for years, if left undisturbed. The ground cover makes a charming background for the bulb flowers and after the bulb foliage dies down, keeps the space attractive throughout the year.

Evergreen shrubs, such as Heather, shrubby Thymes, Helianthemum,

Evergreen shrubs, such as Heather, shrubby Thymes, Helianthemum, Santolina, Pentstemons, Ceanothus prostratus and Kalmia microphylla are good for winter foliage effect. Many of the Sedums, encrusted and mossy Saxifrages, Veronicas and creeping Thymes are also evergreen in

this country and make a fine winter display.

Dainty and slow growers should not be planted close to the rank growing types. Such plants as the dwarf Phlox, Iris, Lewisias and Violas are especially desirable for small pockets, while Arabis alpine, most Aubretias, Cerastium tomentosum and the vigorous Campanulas should be in large pockets and made to stay there.

Don't use Michaelmas daisies, German iris, Delphiniums or other tall and robust plants, however beautiful they may be, in a small rockery. They are out of proportion and, what is more to the point, will often kill

out the more desirable plants of slower growth.

Alpine Plants-What Are They?

Alpines are not a group apart but rather relatives of familiar lowland plants that have adapted themselves to the short growing season and rigorous climatic conditions on the mountain heights. Thus we have alpine lupines, asters, buttercups, cinquifoils, phlox and so on, all close relatives of tall growing lowlanders of the same groups. Alpine forms almost invariably sacrifice stem and leaf growth in favor of the flower. This results in dwarf growing, small leaved species with flowers as large as their lowland cousins. Frequently the intense light of the high mountains seems to intensify the colors of the flowers, giving them purer and more dazzling colors.

Such dwarf forms have been developed in all the mountain ranges of the world so that there is an almost endless variety from which to choose. The mountains of Europe and Asia have yielded up their alpine treasures to enthusiastic plant explorers until many of the finest are more widely known in American gardens than our own choice native plants. There is no area in North America that can produce a greater variety of choice alpines than the mountains of Oregon. The Cascades, the Siskiyous, the Blue Mountains and the desert ranges of the southeastern part of the state all have their alpine flowers and it is our hope to introduce many of them to the gardens of this country.

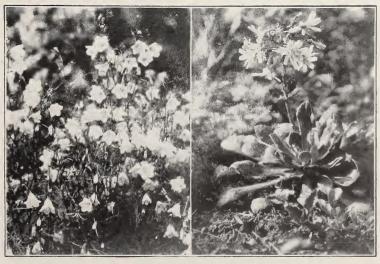

Perhaps the finest of American alpines are the dwarf phlox of which Oregon has a goodly array in white, lavender and pink. In addition to those are many Pentstemons, Saxifragas, Erythroniums, Brodiaeas, Lilies, Eriogonums, Asters, Erigerons, Ranunculus, Potentillas, Violets, Lewesias and many others that are yet entire strangers to our gardens. Some of them are listed in this catalogue for the first time. Of many others we have a limited stock from which we expect to grow enough plants to warrant putting them on our list. It will pay anyone interested in something new for their garden to get in touch with us as we can supply individual plants of many not listed as yet.

Some shrubbery is essential in a well-balanced rock garden and a shrubby background often adds greatly to its beauty. For small rockeries there are tiny shrubs and for larger ones some of the taller growers are available.

The following, which are described in the main body of this catalogue, are suitable for various uses in the rockery: Arctostaphylos, Azalea, Berberis, Ceanothus, Cistus, Genista, Helianthemum, Kalmia, Phyllodoce, Rhododendron, Santolina, Shortia, Thymus citriodorus, and the following Pentstemons: barettae, cardwelli, fruticosa, menziesii, and rupicola.

		Plants for the Rock Garden	
AC	AEN		Price

	Height 3 to 6 inches	.30
1545	anserina var concolor. Native. Good for a ground cover in	
	moist places. Silvery leaves and yellow flowers. Creeper	.25
1548	cinera. A tiny creeping cinquifoil not over an inch high,	
	with clear yellow strawberry flowers, all summer bloomer. A fine plant	.30
1549	tridentata. A dainty glossy-leaved evergreen cinquifoil with	.00
	clear white flowers. Height 4 to 6 inches. June-July	.40
1550	Miss Wilmotte. Soft red flowered cinquifoil. Blooms over a	0.5
PRIMU	long period. Choice. Height 8 to 12 inches	.35
1560	auricula. Alpine primrose. Smooth leaves and velvety vari-	
2000	ous colored flowers. Height 10 to 12 inches	.35
1580	elatior. The English oxlip raised from seed. Various colors	.35
1585	japonica. Robust growers in various shades of red to white.	
	Height 12 to 16 inches. Fine showy plant for shade or moisture	.35
1590	Red Hugh. A beautiful hybrid primula of the candelabra	.00
	type with dark scarlet flowers	.40
1595	veris. Plants raised from imported seeds of this favorite	
DDEINE	old primrose. Various colors. Height 4 to 6 inches	.30
PRUNE 1610	grandiflora. Really beautiful member of the mint family,	
1010	clear red flowers. Rosettes of cut leaves which turn red	
	in fall. Height 6 to 10 inches	.25

PYRET	HRUM	rice
1612	atrosanguineum. Persian daisy. Red and pink shades pre-	
	dominate in this strain of this fine perennial. Height	0.5
1614	18 to 24 inches\$.25
1014	rose hybrids. A very fine strain of this popular perennial with daisy-like flowers in varying shades of pink.	
	Height 12 to 20 inches	.25
RANUN		
1620	glaberrimus. Mountain butter cup. Early spring bloomer,	
1020	large butter yellow flowers on short stems. Dwarf.	
	Choice and rare. Height 4 to 8 inches	.30
1625	species. Native. Big-leaved butter cup with large bright	
	yellow flowers. A fine garden plant. Height 8 to 10 inches	.35
1630	repens flora plena. Brass buttons. Creeping double flow-	
	ered butter cup. A rapid grower. Creeper	.25
	DENDRON	
1640	californicum. Native. A wonderful evergreen shrub with	0.00
DOMAN	rosy pink flowers. 4 to 8 feet. 12 to 18-inch plants	2.00
1650	ZOFFIA sitchensis. Native. Beautiful pure white flowers on stems	
1000	rising from a mass of small leaves that are almost mat	
	forming; dainty and attractive. Height 6 to 8 inches	.30
ROMNE		.00
1660	coulteri. A limited supply of this beautiful poppy, big silky	
	six-inch white fragrant flowers with orange center.	
	Height 3 to 5 feet. Strong transplanted plants	1.00
SAGINA		
1675	subulata. Dog hair. Mat of soft green felt sprinkled more	
	or less with tiny white flowers. One of the best ground covers for semi-shade. Creeper	.25
CANCITI		.40
SANGU		
1685	canadensis. Bloodroot. A fine semi-shade to shade plant. Palmate leaves and pure white water lily-like flowers	
	on 6 to 10-inch stems. April-May	.30
CANTO		.00
SANTO		
1690	chamaecyparissus. Shrub with silvery foliage, yellow button-like flowers. Height 18 to 24 inches	.35
	<u> </u>	.00
SAPONA		
1700	ocymoides. Almost creeping evergreen shrubby plant,	
	myriads of clear pink flowers. Fine for rockery or	.25
	wall. Height 10 to 12 inches	.20
SAXIFF		
1710	aizoon. Fine encrusted ornamental rosettes of gray stiff	0.5
1720	leaves, red flowers. Height 8 to 10 inchesbaldensis. A minute encrusted form of some two inches	.35
1720	high, with twisted flat growing leaves and cream col-	
	ored flowers	.59
1725	bronchialis. Native. Prickly type of foliage and dainty pink	.0 5
1.10	and white flowers. Height 4 to 8 inches	.50
1727	apiculata alba. Choice evergreen with prickly foliage, white	
	flowers. Height 4 to 6 inches	.50
1728	apiculata. Yellow flowering form of the above. Very	
1700	fine. Height 4 to 6 inches	.50
1730	caespitosa. Native mossy evergreen, cream white flowers. Superior to many of the highly prized European species.	
	Height 4 to 6 inches	.75
1745	cotyledon pyramidalis. Large encrusted rosettes. Great pyra-	
-140	mids of pink and white flowers. Height 18 to 20 inches.	.30
175 5	decipiens. Indispensible rockery plant. Mossy type with	
	creamy flowers. Height 4 to 6 inches	.30
1770	Gilfords seedlings. Fine compact growing mossy type, crim-	40
	son flowers. Height 12 to 18 inches	.40
	SEND FOR BULB LIST	

SAXIFI	RAGA — Continued P	rice
1775	hypnoides. A mossy saxifrage with much divided leaves and creamy white flowers. Later than the decipiens	20
1778	type. A really satisfactory plant. Height 6 to 8 inches\$ lagaveana. An encrusted form somewhat larger than S. baldensis belonging to the aizeon group, with stiff	.30
1780	spikes of creamy white flowers. Height 4 inches macnabiana. This is a smaller edition of the pyramidalis with heavier flower stalks. A very fine thing even	.50
1705	though it lacks the airy grace of the larger form. Height 10 to 12 inches	.30
1785	megasea. Large leaved early bloomer. Heads of clear pink flowers. Height 12 to 18 inches	.25
SEDUM		
1845	acre. Bright green mossy foliage and bright yellow star- shaped flowers. Good carpeter. Creeper	.25
1848	album. Quick growing mat forming short stems, round fat leaves, white flowers. Creeper	.25
1860	dasiphyllum. One of the finest of all rock plants. A compact mass of pale blue pearly beads strung tightly to-	0.0
1863	gether, white flowers in late spring. Creeper divergens. Native. Neat groups of small rosettes of shining	.30
1009	green leaves and heads of vellow flowers. Creeper	.25
1866	douglasi. Native. Green mossy tails with heads of yellow flowers. Height 4 to 6 inches	.25

BRODIAEA HENDERSONI

SISYRINCHIUM GRANDIFLORUM —U. S. Forest Service Photo.

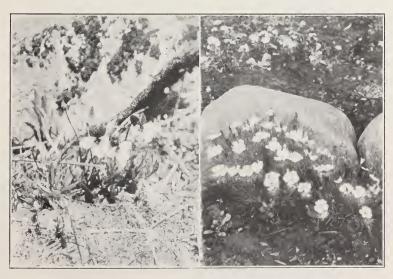

SEDUM		rice
1870	ewersii. Similar to sieboldii only more robust and no pink	
	edging to the leaves. Good umbels of red to purple	
1079	flowers. Height 4 to 6 inches\$.30
1873	glaucum (hispanicum). Mat forming mossy type with beau-	
	tiful blue green foliage and white flowers. Real good	.25
1876	Creeper	.20
1010	of bright orange flowers. Height 4 to 6 inches	.25
1925	lydium. Choice ground cover of mossy mats of green and	
	red foliage. Small white flowers. Creeper	.25
1880	murale. Flat reddish foliage with white flowers having a	
	distinct pink center. Height 2 to 4 inches	.30
1885	oreganum. Native. Rosettes of fat reddish green leaves on	
	short stems. Yellow flowers. Height 2 to 4 inches	.25
1890	pruniatium fosterianum. Stems covered with gray green	
	needles and bright yellow flowers, choice and odd	
	species. Height 2 to 4 inches	.25
1895	rupestris. Stems covered with green and reddish needle-	
	like foliage with flags of bright yellow flowers. Height	0.5
1000	4 to 6 inches	.25
1898	sarmentosum. Yellow green foliage. Yellow flowers on creeping stems. Fine for dry walls or hanging baskets.	
		.25
1900	creepersexangulare. Compact dwarf mossy, resembling the acre	.20
1000	type but even better. Bright yellow flowers. Creeper	.25
1905	sieboldii. Sprangling stems ornamented with thick succu-	0
	lent blue green leaves rimmed with pink; good umbels	
	of red to purple flowers. Height 4 to 6 inches	.40
1910	spathulifolium. Native. Clusters of soft gray rosettes bear-	
	ing great heads of clear yellow flowers on red stems. A	
	real rock plant. Height 2 to 4 inches	.25
1915	spectabile. Very choice tall growing. Large heads of red-	
4000	dish flowers. Height 12 to 18 inches	.30
1920	spurium. Mat forming evergreen bearing heads of white	
	flowers at intervals during the summer. Good ground	.25
1921	cover. Creeperspurium coccienum. Dark red flowering form of the above.	.20
1921	Leaves tinted and edged with red. Creeper	.25
1928	stenopetalum. Native. This is a tight growing blue green	.20
1020	plant which probably is a form of this species. It is	
	however a very striking sedum without considering its	
	yellow flower. Height 6 to 10 inches	.30
1929	telephium. A plant similar in habit to sedum spectabile	
	but with smaller and darker leaves and darker pink	
	flowers. Height 10 to 16 inches	.25
	RVIVUM	
1930	archnoides. A dainty cobweb house leek	.25
1935	brauni. House leek with green rosettes of sharply pointed	95
1945	leaves. Mat	.25
1940	strung together with silvery threads. A choice plant	
	for hot dry places. Mat	.25
1946	montanum. Medium-sized dull green rosettes and big dull	0
1010	rose flowers	.25
1955	tectorum. Hen and chickens. Big rosettes, fleshy leaves	
	around which new offsets grow, hence its popular	
	name. Pink flowers. Mat	.25
SHORT		
1970	galacifolia. Oconee bells. Shade-loving evergreen with beau-	
	tiful nodding pink and white flowers. 4 to 6 inches	.50
SIDAL		
1980	spicata. Native. Geranium-like leaves, clear pink or rose	40
	hollyhock-like flowers in spikes. Height 18 to 20 inches.	.40
	SEND FOR BULB LIST	

SIEVE	RSIA	rice
1990	ciliata. Native. Pinnate hairy leaves and odd nodding	
	reddish flowers with elongated calyx points projecting beyond the flowers. Height 10 to 14 inches\$.35
SILENE		.00
2000	acaulis. Native. Grown from cuttings; better bloomer	
	than the European form. Solid mats of bright green	
2005	moss, bright pink flowers.	.40
2005	californica. Native. Similar to S. hookeri, with dark red flowers	.40
2020	hookeri. Native. One of our most striking plants. Soft	.10
	gray foliage; showy pink to red flowers; flooping stems.	
2021	A gem. Height 4 to 6 inches	.35
2021	alpestris. Narrow, bright green leaves and showers of clear	
	white flowers with deeply cut petals. A fine plant. Height 4 to 6 inches. June-July	.40
2024	laciniata. Native . Flopping stems of dull green leaves that	.10
	carry for a long period a number of enormous vermil-	
9095	lion flowers. Good gritty, well-drained soil and full sun	.40
2025	maritima. A low mass of attractive blue green foliage which carries for long periods large short-stemmed	
	white flowers. Height 3 to 6 inches	.30
1727	pusilla. A lovely little thing with glossy green foliage above	
	which appear dainty jagged petaled flowers over a long	0.0
2029	season. Height 3 inchessaxifraga. Bright green foliage mats above which appear	.30
2020	all summer long dainty white flowers	.30
2030	shafta. A rather rapid growing leafy mass of foliage 4 to	
	5 inches, covered in late summer with masses of rosy	
	flowers. A rock garden gem which gives color at a	.30
CICVDI	time it is most needed. Height 4 to 6 inches	.50
2040	NCHIUM bellum. Native. A real grass flower, dainty and attractive.	
2010	Dark blue flowers with yellow eye. Blooms nearly all	
	summer. Height 10 to 12 inches	.25
2045	grandiflorum. Grass Widow. Dainty little member of the	
	iris family, grass-like foliage, clear half-open purple flowers with orange anthers hung in a partially droop-	
	ing position. A royal beauty. Height 8 to 12 inches	.25

AN OREGON LILY FIELD

An English Authority On Rock Gardening

"It has long been commonly thought that big rock masses are essential to success with the high alpine flowers, and the idea has spread and become deeply rooted that rock gardening is a recreation for the wealthy possessed of extensive grounds. Nothing is farther from the truth. Providing your garden gets the precious sunshine—which some one has described as the life and soul of a garden of flowers—then there is no reason at all why you should not fill it with the choicest jewels that bedeck the mountain ranges of the wide world. This sounds like exaggerated phrase, but it is the plain, unvarnished truth. Some of the alpines are ridicuously easy, most of them respond admirably to a little extraordinary care, while those few that are tantalizing—well, they can very well wait until one's knowledge has reached such a stage that one is able to estimate and to satisfy their needs. It is, then, true that the size of the rock garden is no just measure of its capacity for giving pleasure. The love of building is inherent in all of us, and the average amateur who has hitherto grown his flowers on the flat, finds. when once he has made a start, that he gets as much fun out of it as the babies building castles on the sands. If his attitude toward gardening is a proper one, even the preparation of a rose bed or mixed border is capable of giving pleasure to the digger, but this is nothing to the fierce joy that possesses the rock gardener. Slowly, surely, and with a subtleness that fascinates, the work of his own creation grows under his eyes; there is something substantial to show for his labor, and he experiences the satisfaction that follows, 'something attempted, something done.' It is, I think, true that building a rock garden is so absorbing because one is following an ideal set by nature, here rises a peak or dips a hollow, here frowns some miniature promontory or rises sheer some Liliputian precipice. There gapes a chasm or lies some stony slope or exquisite alpine meadow. It is all so delightfully imitative that in idealistic moments it is easy to imagine one's garden of rocks and flowers peopled with mountain elves. The prosaic methods that are followed in preparing borders on the flat have no such effect on the imagination; they leave one, in comparison, mentally cold, if bodily warm. He who builds well and truly has created a little flower world of his own; he has—it may be in some small suburban plot, dull, flat and enclosed—raised a fair model of a mountain range, and peopled the peaks and crannies and crevices with their own inimitable flowers,"—H. H. Thomas.
